

The Most Successful MultiFocal on the Market

P^{METRO} Progressive[®]

Aspheric Multifocal

& Enhanced P^{METRO} Progressive[®] **Aspheric Multifocal**

Advanced Design. Simple Success.

Designed for the emerging to moderate presbyope, this advanced multifocal lens features near, intermediate and distance corrections in a highly successful combination.

The numbers couldn't be clearer, 40% of the patients that walk through the average Eye Care Practitioner's door are in the age range for presbyopia. Having a GP multifocal lens design that you can rely on is fundamental to success. With an 85% success rate the Metro Progressive is the clear choice for any practice.

An aspheric base curve is the key design feature providing excellent vision at all focal depths both day and night while avoiding corneal molding and spectacle blur. The Metro Progressive has an effective power range of up to +2.00 diopters of add power and maintains natural binocular vision. For patients that require more add power the Enhanced Metro Progressive can deliver up to an impressive +2.75 diopters.

Both of these straight forward designs are meant to be fit empirically; therefore no fitting set is required.

These designs can also be made with toric parameters for patients with significant astigmatism.

Start with the best, forget the rest, and achieve success!

Metro Optics...Always Ahead of the Curve.

The Metro Optics Advantage

- Simple Warranty Policy
- Free Standard Shipping
- Free Plasma Treatment on all GP Lenses
- No Hidden Add on Charges

"In a world where chair time and my time are at a premium, I find first fit and patient acceptance to be very high with your lens.

Computer workers and management personnel alike prefer the Metro Progressive over other modalities including monovision. Being able to see clearly with both eyes at almost every distance (i.e. above your head on a nearby shelf) takes a person back, visually, to their mid-thirties. I find emerging presbyopes are the easiest fits with the low add powers.

The Enhanced Metro Progressive for the 50+ presbyope has really helped add to our satisfied patients."
